

k NN classificationStep 1 Initialization

(Class)

Class 3

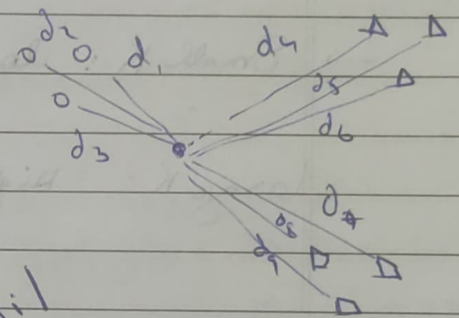

Class 2

Step 2 Calc. distance

Euclidean:

$$d(x, y) = \sqrt{\sum_{i=1}^n (x_i - y_i)^2}$$

Manhattan: $d(x, y) = \sum_{i=1}^n |x_i - y_i|$

Calculate distance from query pt to each sample

Step 3 Short distanceSort the nearest neighbors of the query pt by distances in \uparrow order d_3 — o d_1 — o d_2 — o d_6 — d_4 — d_5 — d_8 — d_7 — d_a — Step 4 Let's keep $k=5$

→ Small K: low bias, high variance, overfitting

large K: high bias, low variance, underfitting

→ K - generally odd no. to minimize ties
